2. A student completed the problem below. Check his work. Explain how you know if each solution is correct or incorrect.

Convert the following measurements:

a. 24 km = _____ m
b. 16 L = _____ mL
c. 38 kg = _____ g

3. Find the sum or difference. Use the boxes to show your work.

a. 493 km + 17 km = 543 m
b. 25 kg − 23 kg = 32 g

4. Write a word problem for which (a), (b), or (c) would be the solution equation.
4. Billy has been training for a half-marathon. He has a strict gym routine that he follows six times a week. For the problems below, use tape diagrams, numbers, and words to explain each answer.

a. Each day Billy runs on the treadmill for 5 kilometers and runs on the outdoor track for 6,000 meters. In all, how many kilometers does Billy run each day?

b. Since Billy has started training, he has also been drinking more water. On Saturday, he drank 2 L 755 mL of water. On Sunday, he drank some more. If Billy drank a total of 4 L 255 mL of water on Saturday and Sunday, how many milliliters of water did Billy drink on Sunday?

c. Since exercising so much for his half-marathon, Billy has been losing weight. In his first week of training, he lost 2 kg 530 g of weight. In the following two weeks of training, he lost 1 kg 855 g per week. Billy now weighs 61 kg 760 g. What was Billy’s weight, in grams, before he started training? Explain your thinking.
